Dr. G. Grabar
Institut Pasteur
28 Rue du Dr. Roux
Paris XV^e France

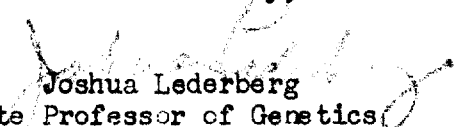

Dear Mme. Grabar:

I have had the great pleasure of meeting your brother-in-law P. Grabar during his visit to Madison last Saturday. During his conversation, he referred to some of your studies with Enterobacteriaceae that I had unfortunately overlooked. I would be most grateful to you if you could help me repair this defect by providing an exchange of reprints.

[I must confess that I had formerly confused P. and G. Grabar, and may have addressed reprints intended primarily for you to him. In future, I will endeavour to be more precise].

The papers in which I would be especially interested concern the use of the check egg for studies of infection and serum protection (Ann. Inst. Pasteur 81: 528, and whatever may have appeared since) and studies on the separation of antigenic components of Salmonella.

Yours sincerely,

Joshua Lederberg
Associate Professor of Genetics
